

DC Reporting

DataCycle Reporting is a powerful Excel, Pdf, Html or Access report generation and distribution engine. It queries and extracts data from across the corporate ecosystem, integrating information from multiple databases into reports that fully leverage Excel's entire range of features for formatting data, and implementing functions and algorithms. A work planner automates the generation and distribution of reports and alerts via email or the intranet.

Why DataCycle Reporting?

Multiple advantages...

for the end user:

- Simplified report generation to ensure optimal information delivery
- Maximum leverage of the ubiquitous Excel application
- Improved accuracy and data consolidation for better informed managerial decisions
- Less time spent on repetitive data handling tasks
- Improved reaction time to critical changes
- Continuous data integrity via automated reporting & storage

for the report designer:

- Time savings through design once model, automated database queries, report generation and distribution
- Bulk distribution of personalized reports
- Planning and scheduling with alerts/detailed notification

for the company:

- Low & predictable costs, and simple licensing. (Low TCO: no "per seat" licensing, no costs for distribution, no add. hardware)
- Quick & simple setup
- Low training costs
- Integrates with your existing office automation and email investment

Main features:

Access any data source via ODBC.

Combine data from multiple sources (Oracle, SQL Server, AS400, Excel, and others) into the same final report.

Create and reuse queries Wizard based query designs provide for reuse in different reports.

Reuse office automation templates Fully employ office automation tools for report design, and reuse the same design in separate reports.

Olap cubes Generate Excel reports that display Analysis Services information or generate your own OLAP cubes in local files.

Define user profiles Separate administrative tasks, query creation tasks, and the tasks related to report design based on user profile.

Plan for report execution Schedule report generation to occur at night or over the weekend to optimize the performance of your information systems.

Store reports in a central repository Create an automatic backup of reports, and provide access to a central repository of historical Excel reports.

Integrate with Excel While other products export data to Excel DataCycle Reporting directly generates Excel reports which fully utilize Excel's entire analytical feature set.

Design reports directly in Excel Maximize use of the editing features of your office automation tools.

Secure and highly scalable

More features:

Personalized report distribution Design report formats and schedule report distribution such that each recipient is provided with relevant, personalized information.

Alerts Automatically generate and deliver via email detailed notifications or simple alerts based on configurable events.

Compatible with the main email tools (MS Outlook, Lotus Notes, ...)

Report generation in several formats (Excel, Pdf, Html, Access, ...)

Requirements:

Memory: 512 Mb RAM

Disk space: 200 Mb Hard Disk

Operating System: Windows 2000, XP or 2003

(both Server and Professional versions)

ERP's

Axapta, Baan, BPCS, JDEdwards, Movex, Navision, Oracle, SAP and other.

Databases

AS400, Oracle, SQL Server, Informix, DB2, Lotus Notes, MS Access, ODBC and others.

Logistics and Distribution

Stock Alerts.
Distribution Cost.
Forecasting.

Management and Control

Balance Scorecard by company, by division, by department, etc.
Budget and Costs Report for each department manager.
Balance Sheet and P&L, Cash Flow.

Clients and Providers

Order Confirmation
Client Offers

DataCycle Reporting

Report Generation and Distribution Engine with Alerting.

Sales Force

Personalized Reports for each Employee.
Reports for Sales Managers.
Sales Opportunities Alerts, Achievement of Objectives, etc.

Sales and Marketing

Reports by Product.
Market and Demand Analysis.

DataCycle MyVision

Access and control of report information via web

- Online query execution returned via Excel, Pdf, Html and Access.
- Transparent information access, wherever the data source may be.
- Online report execution with parameter request for each report.

DataCycle Suite:

DataCycle Reporting

Automation of report generation and distribution in Excel.

DataCycle MyVision

Report execution and control via web.

DataCycle Planning

Automation of budget preparation and tracking.

DataCycle Scorecard

Automated generation and distribution of balance scorecards.

DataCycle SMap

Design of strategy maps.
